

NOTE MAY 2009

## SAP GUI Scripting

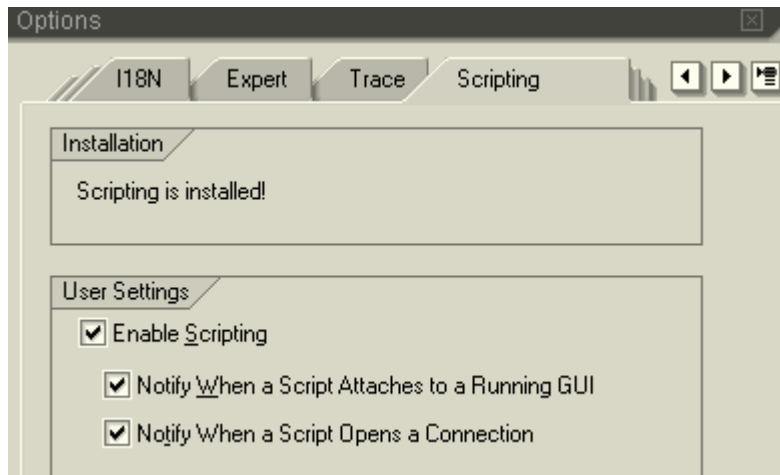

### I Technical requirements

For activation of the scripting the dynamic parameter **sapgui/user\_scripting** needs to be set to TRUE.  
[more details OSS NOTE 480149]

The general enabling is to be adjusted via the menu bar under *Options*.

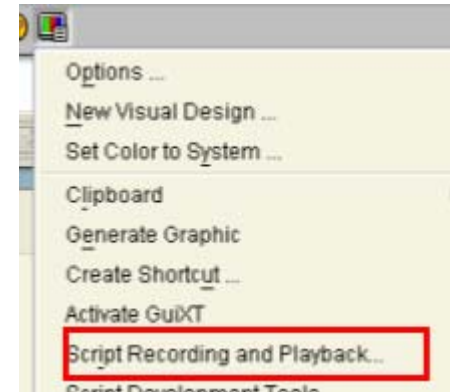

The checkmarks as displayed below should be activated, to also prevent the execution of hidden scripts.

 → Options

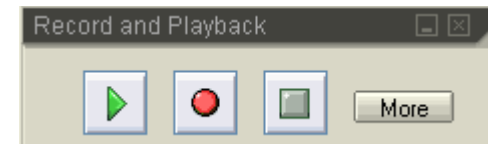

After that the *Script Recording and Playback* is available.

### II Record and Play

Select the corresponding entry in the menu bar.

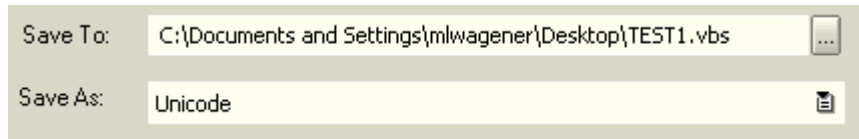

For the recording of recurring tasks you simply have to push the button .

The button  is for *Playback*.

Here  you can adjust the file name and the path for saving.

I.

At the start of the recording you need to define the file name and path:

Make sure that you do not forget to add the file extension [\*.vbs].

Then perform the tasks in SAP® you want to record.

For stop activate the button .

II.

For replay you can simply push , select the corresponding script name.

With this all recorded steps should be repeated.
